

Password Power 8 Password Recovery Plug-In

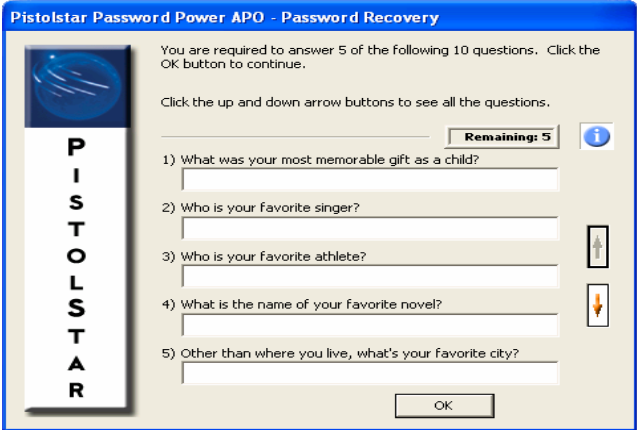

End the Task of Resetting & recovering End-Users' Passwords

Self-Service
Password
Recovery

Empower End-Users to Ret Network Passwords Themselves

- ◆ End-users set password recovery information by providing answers to multiple challenge questions.
- ◆ End-users later recover their network password by answering a subset of the challenge questions to which they previously provided answers.

Administrators:
Are your end-users frequently forgetting their network password and contacting the Help Desk to reset it?

End-users set password recovery information by providing answers to multiple challenge questions.

Administrators can choose to have a partial or complete password presented to end-user.

Maintain Control & Gain Flexibility

- ◆ Configure number of challenge questions end-user must answer for setting recovery information and later recovering their password
- ◆ Select a minimum length requirement for end-users' answers
- ◆ Require end-user to make a password change or present them with their current password (convenient for remote end-users)
- ◆ Choose whether partial or complete password is presented to end-user
- ◆ Store recovery information and password on LDAP and/or Local Registry

No Proprietary Database
Seamless Client Install – No Servers Required
No Schema Changes Required to Active Directory
